Unlock the Supply Chain Data in Your ERP for Analysis and Collaboration

ANVYL

There's a lot of great information in your ERP system. Anvyl lets your entire team use it to manage your supply chain.

ERP systems help companies manage their businesses from financial operations to inventory management, production and customer fulfillment. But as good as ERP systems are, they could be a lot better.

Yes, they collect a lot of information, and businesses benefit greatly from having one unified version of the truth. But the fact is, most of that information is static and can't be shared because it resides in other siloed applications that sequester the information they contain: manual spreadsheets, PDFs, emails, word docs and faxes.

But what if your team could use the information in your ERP system to run your supply chain? What if it could be shared in an interactive, collaborative workflow environment? And what if that information behaved more like intelligence that gave you visibility and insight into what was really happening in your business?

That's what's possible with Anvyl's Supply Chain Production Management Platform.

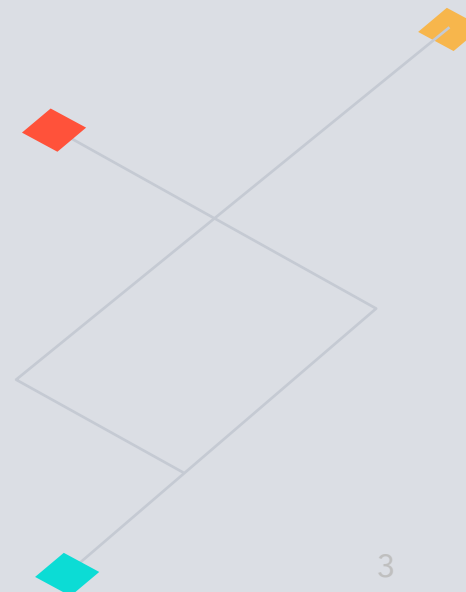

ANVYL

Manual supply chain management has always been tedious.
Now, it's also unnecessary.

Companies typically use their ERP systems to run their financial operations. And with good reason. Data entered into any financial module gets stored in a single repository that serves the entire enterprise. That eliminates the need to maintain separate systems and manually re-enter data into each one, so organizations save time and reduce their risk of error. But it also makes them run their supply chain system manually.

Most ERP systems are built to provide that “single version of the truth” organizations find so valuable. But in order to do that, they have to restrict access to users to keep the number of people accessing the system to a minimum. They typically don't incorporate data or file sharing, messaging or task management either, so they're notoriously difficult to communicate with. And while that's also good for the integrity of the company's financial data, it doesn't encourage collaboration. And we see that as an opportunity to improve communication, ensure fast resolution of issues, and manage to budget.

ANVYL

Anvyl automates manual tasks, so you can analyze real-time data, and centralize information for collaboration and monitoring.

The screenshot displays the Anvyl software interface for a 'Shipped Order'. The main content area shows the order status as 'Shipped' with a confirmation message from 'Wilhelmina Davids'. The interface is divided into several sections:

- Order Summary:** Includes 'Shipped Order' for 'Brella Canopy (#GC003-03)', supplier 'Gadgetinis, Corp.', and purchase order #5690. It lists items with quantities and prices, such as 'Part Item (1)' for USD 35,250.00 and 'Other Items (0)' for USD 0.00.
- Status:** A progress bar shows stages: PRE-PRODUCTION, PRODUCTION, PRE-SHIPMENT, and SHIPMENT. Key dates include 'PO accepted Feb 1, 2020', 'Prod. started Feb 28, 2020', 'Shipments on sched.', and 'Shipped: Mar 30, 2020'.
- Activity Timeline:** Shows recent events: 'Shipment confirmed' on Mar 31, 2020 at 12:00 PM EST, and 'Email sent: Confirming shipment' on the same date at 12:00 PM EST.
- Logistics Tracking:** Displays 'In transit to Secaucus, NJ' with a 'Delivery delayed 4 days' warning. It provides the expected delivery date of 'Apr 12, 2020' and the carrier 'Logistics by Mainfreight'. A map shows the route from Redmond, WA to Secaucus, NJ.
- Collaborators:** Lists 'Gadgetinis, Corp., Inc.' with details like 'Cargo ready date: Mar 30, 2020' and 'Picked up: Mar 31, 2020'. It also shows 'Redmond, WA' and 'Seaport' with their respective schedules.

ANVYL

Anvyl integrates with your ERP system to make supply chain management a team sport.

A supply chain isn't a linear process. It's full of relationships, all of which have dynamics that need to be managed. Your customers, suppliers, partners and your organization are all inter-related and it's imperative that you not only have up to date information about what's happening, but also visibility into those relationships so you can manage the ultimate result.

For instance, consider for a moment how much information is resident in the humble purchase order. There's information about the supplier, the product, inventory, logistics, shipping, timing, pricing and financing. That information involves nearly everyone in the company. That's why supply chain management is everybody's job. And it can be, if that information is visible, connected and actionable as part of the workflow in a powerful, collaborative environment.

That's what Anvyl does. Our pre-built integrations sync with your ERP system, as well as freight forwarders and inventory management solutions to deliver welcome visibility across all these platforms throughout the production and shipment of your goods. This integration gives employees from different departments all the information they need to execute day-to-day tasks.

Instead of requiring users to use emails, individual spreadsheets and other siloed information that make communication cumbersome, Anvyl improves workflows by allowing organizations to store messages, files, and collaborate around production on one platform. And that means, for possibly the first time, your team can also have an accessible, referenceable audit trail across the most pivotal part of your supply chain, production, to help make quick, well-informed decisions.

ANVYL

Anvyl's intuitive dashboards are the front end to layers of automation and analytics that provide these actionable insights and high-level summaries, so you always have the ability to drill down into details. These dashboards can, for example, report status updates on important production milestones, supplier performance metrics, and action items to keep teams aligned and informed.

The screenshot displays the Anvyl dashboard for a supplier named Baxter Manufacturers. The interface is divided into several sections:

- Supplier Information:** Shows the supplier name "Baxter Manufacturers" and a link to "View all suppliers".
- ORDERS HEALTH:** A progress bar indicates "4 active order statuses" with categories for Confirmed, Confirming, and Update needed.
- ENGAGEMENT:** A bar chart shows "42 total milestone updates" and "Recently shipped orders" with a 51% completion rate. It distinguishes between "Supplier's updates" and "Your team's updates".
- ON-TIME PERFORMANCE:** A bar chart shows "40 shipped orders" with a 99% on-time performance rate.
- DOCUMENTS:** A section for "Add documents".
- MAIN ADDRESS:** 123 Industry Blvd, Building 4, Forrester, CA 12312.
- NOTES:** Date of last audit: Nov 18, 2018.

The main content area is titled "Orders" and shows a list of active orders (25 total). Each order card includes:

- Order Details:** Name, ID, PO#, units, and value.
- Production Status:** A progress bar showing stages: PO accepted, Prod start, Check-in, and Target ship.
- Action Items:** Buttons for "UPDATE STATUS", "SEND REMINDER", and "UPDATE STATUS".

Order Name	ID	PO#	Units	Value	PO Status	Prod Start	Check-in	Target Ship
Gadget Copter	#GC020-02	5684	475,000	USD \$4,922	PO accepted Apr 1, 2020	Prod start: Apr 10, 2020	Check-in: May 21, 2020	Target ship: May 28, 2020
Fax Tie	#FT010-10	5683	750,000	USD \$6.84	PO accepted Apr 1, 2020	Prod start: Apr 6, 2020 (Not confirmed)	Check-in: May 21, 2020	Target ship: May 28, 2020
Gadget Claw	#GC055-55	5682	475,000	USD \$4,922	PO issued Apr 1, 2020	Prod start: Apr 7, 2020 (Confirming...)	Check-in: May 21, 2020	Target ship: May 28, 2020
Mackintosh Raincoat	#MR007-07	5681	24	USD \$524.25	PO accepted Apr 1, 2020	Prod start: Apr 10, 2020 (Rescheduled 26min ago)	Check-in: May 21, 2020	Target ship: May 28, 2020

ANVYL

Your ERP system is powerful but doesn't have the workflow, integration, and enhanced visibility of Anvyl's collaborative environment.

To learn more about how we can bring intelligence and interactivity to your supply chain, visit us at www.anvyl.com. We think you and your entire team will enjoy the difference we can make.
